Figure 1 is a ternary diagram illustrating the distribution of diamond thicknesses (medium, slightly thick, and none) across different faceted diamond types (3.5%, 50%, 57%, 62.7%, 43.0%, 36.5%, 41.0%, 75%). The diagram shows the relative proportions of these three categories for each faceted type. The 'medium' category is represented by the top vertex, 'slightly thick' by the bottom-left vertex, and 'none' by the bottom-right vertex. The faceted types are labeled along the edges and within the diagram, indicating their specific composition of thicknesses.
