This Laboratory Grown Diamond (LGD) described in this Report has been analyzed, graded and Lasencibed's by International Gemological Institute (GB). A LGD has sessribidly the chemical, physical and optical properties as a mined diamond, with the exception of being man-made (a manufactured product). LGD's are typically produced by CVD (chemical vapor deposition) or by HPHT (high pressure high temperature) growth processes and may include post growth modifications to change the color. Isl utilizes the most advanced techniques and equipment currently available including, binocular microscopes, admand color masters, non-contact-optical measuring device including, binocular microscopes, admand color masters, non-contact-optical measuring device including. This LW-VIS-NIR is marin spectroscopy, and fluorescence with the production of the color of the color
