The laboratory growndiamond described in this Report (Report) has been graded, tested, analyzed, examined and/or inscribed by International Gemological Institute (I.G.I.). A laboratory grown diamond is one that has essentially the same chemical, physical and optical properties as a mined diamond, with the exception of being grown by man. Many diamonds are used in jewelry applications, and can be utilized in many different ways. I.G.I. offers a variety of services, including grading, testing, analysis, examination, inscription, repair, cleaning, and maintenance. The laboratory grown diamond is available in all sizes, shapes, colors, and clarity grades. It is important to understand that the laboratory grown diamond is not a synthetic diamond, and it is not a simulated diamond. It is a real diamond, and it is a valuable asset. The laboratory grown diamond is a product of modern technology, and it is a testament to the ingenuity of the scientific community. The laboratory grown diamond is a product of the future, and it is a symbol of progress and innovation. The laboratory grown diamond is a product of the past, and it is a reminder of the challenges we have overcome. The laboratory grown diamond is a product of the present, and it is a source of pride and accomplishment. The laboratory grown diamond is a product of the world, and it is a reflection of our shared humanity.
